### DI3500 Industrial Media Air Cleaner

Two 4" pleated, MERV 8 prefilters; two MERV 14 bag filters; belt drive, forward curved blower; 2HP TEFC motor, 208-230-460/60/3; junction box; minihelic gauge (0 to 2.0"); 4-way adjustable discharge grille; four eyebolts.

### How it Works

Dirty air is drawn through both ends of the DI Series units and passes through two stages of filtration - pleated prefilters to remove 3-10 micron dust particles, followed by multi-pocket bag filters to collect smoke and fume particles down to 0.3 microns. The filtered air then enters the blower - located in the center of the unit - and is discharged to atmosphere through an adjustable grille.

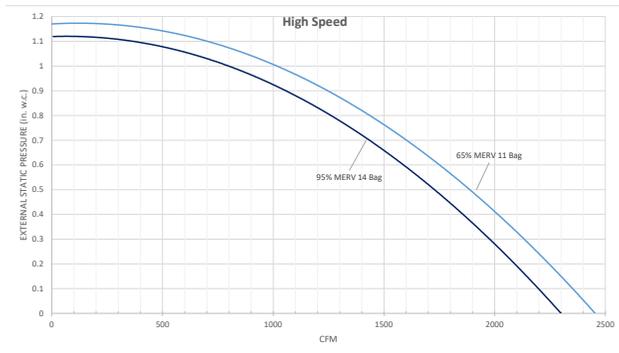

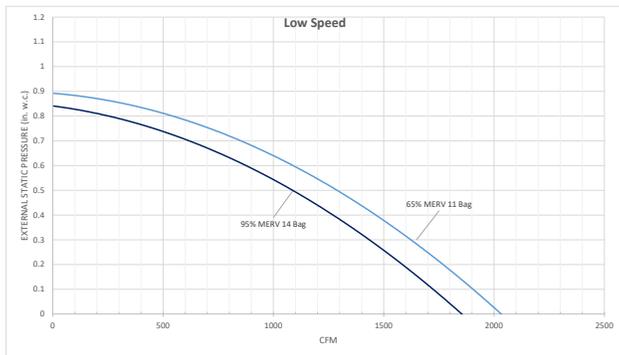

The unit can be either wall-mounted utilizing the leg support assembly, chain-hung, or suspended from threaded rod. Eyebolts are supplied with the unit. All materials used for mounting and suspending the unit must be able to support the weight of the unit and the material collected.
